· Case Western Reserve University

Cleveland, Ohio

May 2017

Bachelor of Science in Computer Science

- Minors: Artificial Intelligence & Biology

- Cumulative GPA: 3.90/4.00

Skills

Python • JavaScript (React, Node) • Java • HTML/CSS • SQL • Docker/Kubernetes • Google Cloud

Experience

• BrightEdge Cleveland, Ohio

Software Engineer

2019-Present

- Full-stack engineer for the leading SaaS SEO Platform specializing in Python and JavaScript.
- Secured \$1M+ in contracts by launching "BrightEdge Daily Pulse," an application helping customers track daily movement of important SEO keywords developed using Python, Django, React, Looker, and BigQuery.
- Uncovered unique insights for customers by processing 100+ GB of logs/day fully serverless on Google Cloud with Python3, Terraform, Looker, and BigQuery. Built both <u>products</u> that headlined Brightedge's Share20 conference.
- Saved 50% on costs, improved peak runtime by 20%, and reduced system startup time by 600% by migrating workloads from dynamically generated AWS EC2 boxes to auto-scaling Celery workers on Kubernetes using Python3 and Helm.
- Maintained "Collections Framework," an internal data collection platform built with Python, Django, Celery, Hadoop, and Impala. Improved processes from requiring weekend intervention to automated with a 99.99% collection success rate.
- Developed "Reporting Dashboards," a suite of internal Looker dashboards leveraging data in BigQuery. Dashboards created include reporting on customer feature usage, weekly data collections monitoring, and GCP cost tracking.
- Built "Content Advisor," a tool for customers to generate content ideas using Node, Express, React, and CloudSQL.
- Helped grow the BrightEdge Cleveland R&D office from 2 to 10+ members. Onboarded and mentored engineers, performed code reviews, and interviewed potential hires for technical capabilities and cultural fit.

• IBM Watson Commerce Columbus, Ohio Software Engineer 2017-2019

- Full-stack developer for a B2B file transfer service transmitting and translating 3.5M docs/day.
- Lead releases from design and development in Java to deployment in production.
- Team lead for the organization-wide project to transition infrastructure from servers to microservices using Docker, Ansible, Kubernetes.
- Developed a weather chatbot proof of concept for the Weather Channel using Python.

• CLK Technologies Cleveland, Ohio
Cofounder 2016-2017

- Collaborated with businesses to develop technical solutions that satisfy client needs.
- Built a NYC based client's web application using Python, JavaScript, HTML, and CSS.
- Launched RentIQ, a web-based property management tool built using Python, JavaScript, HTML, and CSS
